New York, NY | 347-935-9179 | topgyal.gurung@gmail.com | [linkedin.com/in/topgyal](https://www.linkedin.com/in/topgyal) | github.com/topgyalgurung | topgyalgurung.me

PROFILE

Full-stack software engineer with a B.A. in Computer Science and direct experience designing, building, and deploying production web applications. As a Springboard Software Engineering Fellow, delivered a live full-stack platform (Himalayan Connect NYC) end-to-end from Figma design through authentication, caching, and secure production deployment. Proficient in React, Next.js, Node.js, and PostgreSQL, with additional depth in API security, data engineering (SQL, BigQuery), and cloud infrastructure (AWS Solution Architect certification in progress). Brings a research background in machine learning (PyTorch, HPC) and a problem-first approach to building reliable, scalable systems.

SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS, Shell Scripting

Frameworks & Libraries: React, Redux, Next.js, Node.js, Express

Databases & Cloud: PostgreSQL, MongoDB, Redis, GCP BigQuery, Docker, AWS (Solution Architect in progress)

APIs & Practices: REST, GraphQL, Git, GitHub Actions (CI/CD), Test-Driven Development, Postman

Certifications: AWS Academy Cloud Foundations, CodePath Cybersecurity, Big Data Analytics with Hadoop & Spark, Python for Everybody

EXPERIENCE

Software Engineer Fellow

Jun 2024 – May 2025

Springboard | Remote

- Built and deployed a full-stack community platform, Himalayan Connect NYC, using Next.js, React, and PostgreSQL — translating Figma designs into a production application giving the NYC Himalayan community centralized access to 25 community resources. ([Live](#))
- Implemented authentication, role-based dashboards, search/filter, and interactive Google Maps integration; added Redis caching that cut *response time by 5%* through optimized data fetching.
- Strengthened production reliability with rate limiting, firewall rules, and observability/speed-insight monitoring, validated through unit and integration test coverage.
- Designed and built a secure RESTful API for a dog-adoption platform (Node.js, Express, MongoDB) with token-based authentication across 7 CRUD routes following MVC architecture, verified with a Mocha/Chai test suite.
- Built a Space Travel Planner app with React Hooks and React Router, implementing dynamic forms and client-side routing with full UI test coverage via React Testing Library.

Tech Operations Associate

Nov 2021 – Oct 2022

Krishnamurthy Tandon Foundation | New York, NY

- Managed vendor relationships and third-party integrations across 3 vendors, coordinating deliverables and timelines for cross-functional business, music, and nonprofit initiatives.
- Reorganized contact databases, records, and project documentation into streamlined digital systems, improving data accuracy and accessibility.

- Led technical setup and digital initiatives — social media management, ad campaigns, and website updates — supporting live events and studio operations.

Data Engineer Intern

Jun 2019 – Aug 2019

Real Factors (acquired by 7Park Data) | New York, NY

- Resolved geospatial data-parsing errors in SQL/BigQuery, restoring accurate map visualizations ahead of a key acquisition deadline.
- Integrated and transformed multi-source datasets using SQL (joins, partitions, aggregations) and GeoJSON to build reliable BI tables and views.
- Built interactive dashboards and reporting tools in Apache Superset, documenting processes for team continuity.

Machine Learning Researcher

Sep 2018 – May 2019

Hunter College, with Prof. Jia Xu

- Trained and optimized a neural attention model (Codenn) in PyTorch on CUNY's HPC cluster, using CUDA and Linux shell scripting to improve training performance.
- Researched state-of-the-art NLP machine-translation models and presented findings to faculty and peers to guide experimental design.

EDUCATION

Data Analytics, COOP Careers — 2026

Software Engineering Certification, Springboard — 2025

B.A. in Computer Science, Hunter College — 2020

CUNY 2X Tech Talent Pipeline (TTP) Residency, Hunter College

PROJECTS

- **Financial Invoice Dashboard** (2025) — Secure full-stack Next.js dashboard with Auth.js authentication, streaming Suspense, and a Postgres.js data layer; added search, pagination, and caching for invoice CRUD workflows.
- **Myspace Social Media Clone** (2025) — Full-stack social platform on Next.js 14 with Prisma/PostgreSQL, implementing follow/unfollow, Google OAuth, and real-time feed updates with optimized rendering.
- **CunyFirst2.0 Course Scheduler** (2019) — Backend contributor on a 4-person Agile Scrum team; built Sequelize models, Express API routes, and JWT auth for course registration.

LEADERSHIP

- Accountant (Volunteer), Lo-Nyamship Association USA (2026–2028)
