

Full stack software engineer with strong backend and database expertise and a Computer Science background. Experienced in designing scalable APIs, data-driven applications, and production-ready systems. Skilled in JavaScript/TypeScript, Python, Java, and SQL, with hands-on experience across Next.js, React, Node.js, PostgreSQL, AWS, and LLM integrations.

SKILLS

Languages

JavaScript, TypeScript, Python, Java, SQL, HTML/CSS, Shell

Frameworks

React, Redux, Next.js, Node.js, Express, Docker, Kubernetes

Data & Cloud

PostgreSQL, MongoDB, Redis, BigQuery, AWS

APIs & Tools

REST, GraphQL, Git, GitHub Actions, TDD

AI

LangChain, OpenAI & Claude APIs, Vercel AI SDK

EDUCATION

B.A. Computer Science

Hunter College, 2020

Software Engineering Cert.

Springboard, 2025

Data Analytics

COOP Careers, 2026

CERTIFICATIONS

Google AI Essentials · AWS Academy Cloud Foundations · Python for Everybody · Google Data Analytics Professional Certificate · Big Data Analytics with Hadoop & Spark · Claude Code in Action

LEADERSHIP

Board Member (Volunteer Accountant), Lo-Nyamship Association USA – 2026-2028

President, School Student Alumni Association – 2026-2027

EXPERIENCE

Software Engineering Trainee – Springboard

06/2024 – 05/2025

Remote

- Built and deployed full-stack applications using JavaScript, TypeScript, React, Node.js, Express, and MongoDB, applying RESTful API, MVC, testing, and authentication patterns.
- Engineered a secure RESTful API with Node.js, Express, MongoDB, implementing token-based authentication, 7 CRUD routes, MVC architecture, and Mocha/Chai test coverage.
- Built a Space Travel Planner with React Hooks and React Router implementing dynamic forms, client-side routing, and comprehensive automated testing.

Tech Operations Associate – Krishnamurthy Tandon Foundation

11/2021 – 10/2022

New York, NY

- Improved website uptime by 20% diagnosing JavaScript deployment issues and optimizing Netlify configurations.
- Coordinated vendor teams across digital projects, managing technical deliverables, timelines and third-party integrations.
- Streamlined digital systems and data organization with contact databases, records and project documentation improving accessibility and operational efficiency.
- Supported digital initiatives including website updates, social media campaigns, advertising, and event technology setup.

Data Engineer Intern – Real Factors

06/2019 – 08/2019

New York, NY · acquired by 7Park Data

- Diagnosed and resolved geospatial data issues using SQL and GeoJSON, restoring accurate map visualizations ahead of a key acquisition deadline.
- Integrated and transformed data from 10+ public and proprietary sources in BigQuery using SQL joins, partitions, aggregations and data modeling techniques.
- Built structured tables and views in BigQuery to support scalable analytics and downstream reporting.
- Developed interactive dashboards in Apache Superset, documented data workflows to improve team knowledge transfer and continuity.

Machine Learning Researcher – Hunter College

09/2018 – 05/2019

With Prof. Jia Xu

- Trained and optimized a Neural Attention Model for machine translation using PyTorch, CUDA, and Linux-based HPC infrastructure.
- Evaluated 6+ state-of-the-art NLP models for machine translation and documented experimental findings to support model development and reproducible research.

SELECTED PROJECTS

Himalayan Connect NYC

01/2025 – Present

- Engineered and deployed a full-stack community platform using Next.js, TypeScript, Prisma ORM, and PostgreSQL, translating Figma designs into a production-ready application.
- Implemented authentication, role-based dashboards, search and filtering, Google Maps integration, Redis caching, and Cloudinary-based image management.
- Deployed on Vercel with rate limiting, firewall protection, performance monitoring and comprehensive production documentation.

RAG-based Knowledge Retrieval App

Sep 2025

- Built a RAG-based knowledge retrieval application using Python, LangChain, OpenAI APIs, and ChromaDB for semantic document search and conversational Q&A.
- Engineered a document-processing pipeline covering ingestion, chunking, embeddings generation, vector storage and similarity-based retrieval.

Silicon Valley Trail

Nov 2025

- Architected a modular Flask application using Application Factory pattern, Blueprints, SQLAlchemy, and SQLite for a replayable simulation game.
- Built a rule-based game engine with persistent state, event-driven workflows and OpenWeather API integration with mock fallbacks.
